

Indicators from open data science as a measure of urban sustainability in Italy

Supplementary material

January 27, 2026

Abstract

In this supplement we show the full set of figures showing the spatial layers used to calculate the numerical values of urban indicators. In the main text, Fig. 4 shows one such example in higher detail; here figures are mostly essential, as they were produced with an automatic procedure in GRASS GIS. In particular, legends are not reported, as they are all the same as Fig. 4 in the main text. A set of nine panels is shown for each functional urban area (FUA), one for each page, in alphabetical order.
